Project Name	AI FAQ Assistant API

1. WHO IS THE USER?

Customer / User

A person who needs quick and accurate answers to frequently asked questions about a product, service, organization, or application.

2. WHAT DOES THE USER SAY?

- "I need an answer quickly."
- "I don't want to search through many pages."
- "I want accurate information."
- "I have asked this question before but still need help."
- "It would be easier if I could get the answer automatically."

3. WHAT DOES THE USER THINK?

- They think finding simple information should not take much time.
- They expect quick and relevant answers.
- They may feel that manually searching FAQs is inconvenient.
- They expect the system to understand their questions.
- They want reliable information without repeatedly contacting support staff.

4. WHAT DOES THE USER DO?

- Searches websites or FAQ pages.
- Reads available information to find an answer.
- Contacts customer-support staff when an answer cannot be found.
- Repeats questions when information is unclear.
- Spends additional time searching for relevant information.

5. WHAT DOES THE USER FEEL?

- Frustrated when answers are difficult to find.
- Impatient when responses are delayed.
- Confused when information is unclear or scattered.
- Satisfied when the required answer is provided quickly.
- More confident when the information is clear and relevant.

6. USER PAINS

- Long waiting time for responses.
- Difficulty finding relevant FAQ information.
- Repeatedly asking the same questions.
- Information may be scattered across different sources.
- Dependence on customer-support staff for simple queries.
- Inconsistent or unclear responses.

7. USER GAINS

- Quick access to answers.
- Easy FAQ search and retrieval.
- Clear and relevant responses.
- Reduced waiting time.
- Convenient access to information.
- Improved user experience.

8. USER GOALS

The user's main goals are to:

- Get accurate answers quickly.
- Find relevant FAQ information easily.
- Reduce the time spent searching.
- Avoid unnecessary communication with support staff.
- Access information through a simple and convenient system.

9. HOW THE AI FAQ ASSISTANT API HELPS

The AI FAQ Assistant API addresses these user needs by providing a centralized backend system for managing and retrieving FAQ information.

The system can:

- Store FAQ information in a centralized database.
- Provide API-based FAQ retrieval.
- Search for relevant FAQ information.
- Generate AI-assisted answers.
- Reduce repetitive customer-support queries.
- Provide faster access to frequently requested information.

10. KEY INSIGHT

Users need a simple, fast, and intelligent way to obtain answers to frequently asked questions without spending excessive time searching for information or waiting for customer-support assistance.
